HUMANS OF CSI EDITION

Veronica Pistek speaks with sophomore Jonathan Falcone about The Banner and his life as a CSI student.

Inspiration for a Special Edition

A Letter from The Editor

BY: VERONICA PISTEK

As The Banner continues to provide news, entertainment, and information to the CSI community, my team and I wanted to take this moment to highlight all of the humans that make CSI the remarkable

The Humans of CSI edition of The Banner aims to bring awareness and appreciation to our college's hard-working students, staff, professors, administration, and various other leaders on campus.

As a current junior here at CSI, I have met some of the most outstanding people in my life. Whether it be a professor who made a striking discovery during years of research, or a student working toward becoming a successful entrepreneur, I wanted some way for these stories to be told.

In order to make this special edition happen, our writers and editors reached out to various people in hopes to interview them for this issue. It was to our greatest delight and pleasure that we were able to sit down with these remarkable humans

and learn more about their lives.

Before the idea for this issue became a reality, I personally was inspired by Humans of New York and Frederick Kaufman.

toblog comprised of street photographs and This quickly became a social media sen- professor. sation, leading to a Humans of New York book, documentary, and even inspired hun-"Humans of" blogs.

Frederick Kaufman, our advisor and professor of English and Journalism, has also played a role in the birth of this idea. Professor Kaufman gives his ENL 277 students an assignment to write a profile story. His students then interview a classmate or person at CSI and then create a picture of this humans' story with their words.

In the same way, our team wanted to sit down with staff, students, administration,

which we hope to share with all of you-- dations.

Get Psyched With Aishwarya Udayan!

CSI Junior Finds Culture in Her Career Path

BY: OLIVIA FRASCA

Studying psychology is a natural choice for Macaulay CSI junior Aishwarya Udayan. "The culture that I had most of my foundations in is community-based," she says. "Helping the other person is a very natural thing.

Udayan went to high school in Queens and knew she wanted to stay close to home when she applied to college. She lived near private universities but felt they weren't cost-effective for her career plan.

"CUNY impacted my choice a lot. My brother was a CUNY student. The reason why I chose the College of Staten Island was because I knew I wanted to go into psychology."

Udayan was impressed with the psychology program at CSI and the Macaulay Honors College. CSI is also the only CUNY school that offers a Bachelor of Science in Psychology.

Udayan is currently doing independent research at the Institute For Basic Research (IBR) just outside of campus. In a behavioral pharmacology lab, her experiments focus on Autism Spectrum Disorder

She runs tests and observations on mice that exhibit behaviors of ASD. Her thesis is neuroscience-based and a great start for what she wants to study after grad-

understand the psychological parts that are happening in this model of autism," she adds about her work at the IBR. Udayan is aiming for graduate school

"You need some of neuroscience to

and wants to become a clinical psychologist. But she wasn't always sure this was the right path.

She considered careers in education and computer science but realized they

weren't her calling. In her junior year of high school, she took a psychology class and it clicked.

Udayan's studies were also influenced by her family. "In Indian culture, we do a lot of things with our extended family. Most of my cousins and even my aunts are all in the medical field."

The flexibility of a career in clinical psychology spoke to her. "You could be in a hospital, you could be in a school, you could be doing research, you could be teaching, and you could be at the work-

Udayan is minoring in American Sign Language (ASL) and studio art. Her minors weren't preplanned.

She wanted to take a language in college and chose ASL because one of her friends in high school was hard of hearing. "She started teaching me how to do the alphabet in sign language. And I was like, you know what, I know [how to sign] a-bc-d, so I might as well just continue.

As for studio art, she took a painting class with her close friend. Udayan admits that art was intimidating to her, as she had more experience with craft.

Her first project in painting class was a challenge because she was scared of using color. "My mentality was, if I use color and I make a mistake, I can't change it," Udayan says. "The thing is, you could change it.

She realized that her art classes were therapeutic. Although these classes involve a lot of manual labor, the stress she feels is temporary. "You're engaging your mind and your body at the same time and I feel like that's the more soothing part of

Udayan lives a few blocks away from campus. She found her roommate just before graduating high school.

Although her family lives in Long Island, Udayan tries to stay on Staten Island during the weekends. She catches up on chores, shops, and tries new food with her roommate, who is more familiar with the

less authentic in the U.S. compared to where she grew up because it's missing the heat of tropical climate.

"Because there are more heat and moisture in the air [in India], the spices are more intense there," Udayan states. "It's a reflection of the culture. There's a heat, so there's a heat in our culture, too."

Udayan knows the community-based culture she grew up in plays a guiding role in her life. She brings elements of this culture to her relationships, art, and career

Dear College of Staten Island, You're Halfway There...

A New Student Expresses Her Feelings Towards CSI

BY: ASHLEY MARTIN

Tania Jean-Louis, 20, is a new full time transfer student who, at this point in the semester, is underwhelmed with the efforts put forth by the College of Staten Island.

After completing two years at Suffolk County Community College, Tania embarked on the journey to continue her education. She had hopes on being a part of a different campus environment while maintaining her relationship with her old one.

Suffolk County Community College is a commuter school, where students

constantly bustling through the buildings. There weren't any housing facilities, people weren't very interactive, and there to network." wasn't a place similar to building 1C, where information about events on campus or clubs are readily available to students.

"This school [The College of Staten Island] goes out of their way to market a sense of community to students," Tania states. She was very optimistic and proceeded to take a tour of the campus before

"They sold me," Tania jokingly states as she mentions that the tour guide really

Anime was a staple in Tania's childhood and she states that she "binge watch[es] a sh*t ton of anime" like "Tokyo Ghoul," "Black Butler," and "Full-Metal Alchemist Brotherhood", so she'll fit right into the anime club. Tania is a shy, anxious, introvert, but doesn't let that stop her from pushing her-

> friends. "During the summer I isolated myself, no work, no school, just me and my cat," says Tania. "I like dorming... I got to know you guys and make friends but if I had the option to live alone I'll probably be my own friend."

> ty has allowed her to open up and make

disorganized and money-hungry CSI real-

During the first week of school, students were welcomed with themed lunches receiving some advice from a soon-to-be like Taco Tuesday or Chinese food, but that graduate, Tania will remember to be selfish was short-lived and ended by week two.

Tania has also noticed that most build-

helped her come to a conclusion. "There's ings on campus are in need of repair, howa lot of clubs, and options and the ability ever the tuition and cost to rent an apartment at Dolphin Cove is stupendously And although Tania isn't in any clubs high.

"Where is our money going?" Tania angrily asks as we both sit across from each other in confusion. She continues her identity while being comfortable in a to state that during the school power outage that took place on Sunday, September 22, she received no information from the school until Monday.

"When the power was out they told us nothing... I know many students were confused, frustrated, and scared because the power went off in the middle of the night, nothing's working, and no one's saying sh*t. The school would send you an update self to become a better person. Being a about a past due bill but won't inform you member of the Dolphin Cove communi- on actual important stuff."

With a look of disappointment, Tania states that, "the way the school handled stuff my first month here set the tone for my expectations of the school, and it's not high. I had a lot of hope."

In the beginning Tania believed that the school was amazing and that she'll love it here but now "their lack of effort Being a resident, Tania noticed how shows." She expects a lot, especially with how much money we give the school.

> "I love the community and its diversity, but CSI, you can do better." After and utilize all the resources the school has to offer, because it's all for you.

Udayan and her family moved from

She says that Indian street food tastes path in America.

Donning a shirt that celebrates both parts

Glick is a member of the Church of Jesus Christ of Latter Day Saints and is define him as a Mormon, as he tells me the members don't want to classify as that any longer and the surprises did not stop

A simple question I asked was: What do you hope to accomplish during the rest

naturally pulled towards the mechanics of of the life that you have here on earth? It filmmaking. "I want to know how movies was received with a straightforward, and frankly, cliche answer. To match that, there always seems to be a fitting response.

> An answer would usually arrive in such a form that it can close out a profile which would bring everything to a closing statement and end the intriguing textual exploration of the person's life.

While I expected something that was for fantasy doesn't stop there. Right be- a mix of capturing memories with a desire for some sort of life altering change as that's what I had learned of Glick, the answer was quite the opposite. The biggest finishing line moment that Glick was looking forward to the most was a simple one:

> If anything, the location was the clincher: the Salt Lake temple in Utah.

That answer could very well stand as the definition of his character. As much as he may pack up and move from one side of the United States to the other, as much as he may decide to transfer colleges and switch cities along the way, and as much as any and all of the pivotal decisions that he might have to make in his future change his life's ultimate path, it's the small things that truly matter for Glick. Smelling the proud of it. He is quick to correct me when roses, raising a family, and enjoying what you can see around you.

What I learned from sitting down and conversing with Glick is that one theme remains concrete in everything this CSI student does in his life.

"Religion is my driving force."

History with Music Won't Affect Career Decision

College Freshman Zachary Howard Undecided About His Future

BY: DANNY CACACE

Zachary Howard is a freshman at the College of Staten Island, where he's figuring out what major and future job will work for him.

Howard's mom, dad and step-dad all are part of the music world. His Mom is a singer, and his dad and step-dad are both drummers. Howard's dad is a drummer for pop singer Avril Lavigne, and he's been a drummer for her for a very long time.

Howard didn't want to be like his family and get into the world of music when he starts out his life in the real world. He wanted to be different, and he felt like he had to adapt to their lifestyle which is what Howard is best known for: his ability to adapt quickly.

He mentioned how his parents made him take piano lessons when he was a kid to start him out early to get him into music, which he hated.

sound so much better. "All I wanted to do was play 'Spiderman: Friend or Foe for the Wii," Howard he knew how to play the piano, and he just said. "I just wanted to be like the other kids said, "Yeah, obviously." who got to do all that fun stuff."

A moment that stood out to him when in the music program for a bit, and said he he was a kid was when his mom was commight want to pursue music as a future caing home with Howard's brother after she reer path after all. He realized he doesn't just picked up his brother from school. She have to be like Tom Jones or Frank Sinatra was about to walk in, and Howard made to get into the music world, and he was fisure he cleaned all the dishes and made nally okay with allowing himself into this sure the house was spotless. world of music.

Most importantly, he got his piano ready to play because he was going to play on the piano 'Song of Storms' from a Zelda videogame.

She was heavily impressed.

Howard was very stubborn and he

mentioned and he really did not want to get section leader in his high school's march- of The Lion King. He felt really honored into the music world just like his parents ing band.

One last moment that really stood out to him was when his dad came back from sophomore year of highschool where his being the drummer for The Lion King on sic class called Rudiments, Rudiments is a dad knew his school's music teacher, and Broadway.

At that time Howard actually played excerpts from The Lion King in his senior course. year of highschool, and his dad was in town to see him perform. His dad came to one of his shows, and realized right away that he was playing The Lion King and told him how impressed he was with his per-

Severe Health Problems Could be the Consequence of Furthering Education

BY: STEVEN J. MCGUIRE

Like any other college student, Patrick Tabor works to pay his tuition and student loans. It just happens that his college job can seriously impact his health as he gets older and he is very much aware of it.

"I see guys who wear thin paper masks or no mask at all," said Tabor, "I wear a big painter's mask with big air filters on the sides."

No hard labor job is easy or necessarily safe, but a physically demanding job that also requires the removal of dangerous chemicals such as asbestos adds just one more thing on a long list of things to worry about in this business. Tabor's main role at his work is to remove sealed bags of asbestos to quarantined areas for the bags to be secured, transported, and then disposed of

According to the Occupational Safety and Health Administration or OSHA, asbestos is the name given to a group of naturally occurring minerals that are resistant to heat and corrosion. Breathing asbestos fibers can cause a buildup of scar-like tissue in the lungs called asbestosis and result in loss of lung function that often progresses to disability and death. Asbestos also causes lung cancer and other diseases.

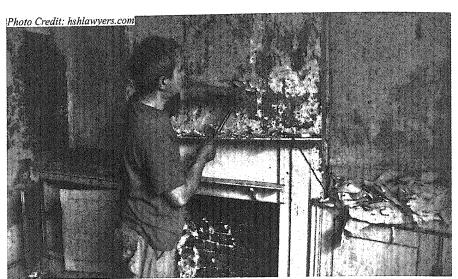

The World Health Organization estimates that 107,000 people die every year from occupational asbestos exposure. A more staggering number, however, is the suicide rate, a 2015 CDC report placing the rate at 53 suicides per 100,000 men which is four times larger than the overall suicide

"People don't understand the struggle and the grind that comes with a job like this," said Tabor, "I'm 28 years old and can not get the bags under my eyes to go away, but it's inevitable. There are people all around the business that are around forty years old and they look like they're sixty."

Jobs in the construction industry come with high levels of stress that stem from many different things. Deadlines are often tight and owners of companies are often extremely demanding because the more days that a job is open the less money the owner of a company will earn.

Owners of private companies pay per man, per day from a payroll standpoint, which means that the more days a worksite is open, an owner has to pay men to be at that job which hurts in overall profits when the job is fully complete.

Stress also comes in the form of replaceability, one of the plusses of a job involving a trade is that the skills you need just attending classes but while trying to be pizza any day for me."

to be successful and productive do not take long to pick up. On the other hand, this makes all trade workers replaceable to an

If you do not want to do your job or you physically can not do your job the company or union you belong to just sends someone different in your place.

To wake up in the darkness every enough. morning and go to a job that takes a large physical and mental toll on you is difficult enough, Tabor, however, does so while not

"I realized that he was really good at

successful enough in those classes to secure a job after graduating from CSI.

In some twisted quicksand-like way, the construction industry grips onto young men who take jobs because they want to follow their fathers' career paths, or because they need the money and it holds them hostage if they can not get out quick

"My friends and my girlfriend constantly tell me to quit because I hate it so much," said Tabor, "But it beats delivering

Andre Lombardi Studies Dinosaurs Every Day--No Kidding!

One Student's Peculiar Fascination with Dinosaurs

BY: JORDAN ABBAS

When Andre Lombardi was four years old, he became fascinated with dinosaurs and has become more interested with them

"Once I got dinosaur toys as a kid, I fell in love with them," said Lombardi. "I wanted to know more about the extinct reptiles."

As Lombardi got older, he wanted to discover dinosaur bones and become more educated on their existence. After doing research, he found out he can study Paleontology in college and get closer to his childhood dream of studying bones of di-

Although studying paleontology is uncommon, Lombardi hopes to take his studies seriously and one day find his own fossils. Lombardi whom is a recent graduate of CSI, now attends Hunter College aiming to get his Bachelor's degree in science.

Lombardi still visits CSI frequently to discuss future plans with his former professors. "It's like networking," said Lombardi. "These people help me grow my resume and I get to volunteer my time for research."

Lombardi's mother, Catherine, has been a big supporter of his ever since his interest of dinosaurs began. She even jokingly refers to him as "dinosaur boy"

"My son has a huge obsession with fossils," said Mrs. Lombardi. "As a kid he

used to try and dig up bones in the back-

According to Lombardi, usually people don't know what paleontology is when he tells them that's his interest in a future career. He often has to explain to them that it's the study of fossils.

In January of 2019, Lombardi was selected to participate in a paleontology internship in Colorado. For two weeks Lombardi got the chance to work alongside with well known scientists and gain

After completing the internship, Lombardi knew that this was what he wanted his career to be based on, and it gave him the determination to work harder. Landing the internship was one of the first real experiences Lombardi had with actual fos-

When Lombardi isn't studying, he's most likely re-watching his favorite movie, 'Jurassic Park." This movie is a favorite for him since it shows real looking dinosaurs and them roaming the world. Sometimes, Lombardi wonders what it would've been like to live at the same time as dinosaurs.

A lot of people say that Lombardi and Ross from friends are similar because they both have a love for paleontology. Lombardi's friends sometimes crack jokes about his love for dinosaur fossils, but at the end of the day they support him. Lombardi's career goal is not so common, but it

On the Air with Michael Ivany

CSI LEADERS

A Look Into WSIA's Personnel Department

BY: LAUREN M. SILVERMAN

Have you ever listened to the radio and worried about the number of staff members the station had? Or have you heard a DJ and wondered if they've been properly trained and on-air certified?

Probably not. And it's Michael "Mike" Ivany's job as WSIA's Personnel Director to make sure it's never a concern.

WSIA, the College of Staten Island's FM radio station, is an organization with a flurry of moving parts. Personnel, one of the station's several main departments, is responsible for the recruitment and management of all staff members.

Ivany was initially drawn to WSIA after hearing about it from the station's News Director, Seamus Hughes:

"My friend Seamus would tell me great tales of foolishness about the radio station and stories of how family-like the members were. I was curious to find out for myself what it was all about."

His interest in music, however, began with a dynamic love for both Top 40 and classical genres.

"Ironically," says Ivany, "at WSIA, we Mike on the air at WSIA. have neither Top 40 nor classical music. We have alternative music ... it's everything in-between. It's the essence of college radio."

Ivany has a variety of responsibilities as the Personnel Director. Personnel deals with the station's recruitment efforts and, according to Ivany, acts as its HR department. He plans and oversees recruitment activities including tabling and conducting workshops for prospective members.

Workshops are a critical part of entry into WSIA, as they highlight important rules that all station members must follow.

"After the workshops to become a member," says Ivany, "students must take a quick exam to ensure they understand the [Federal Communications Commission, or FCC] guidelines and WSIA bylaws."

ensure that members are doing their work and the station remains clean and productive." he says.

As Personnel Director, Ivany meets every prospective member and guides them through the process of joining WSIA, from filling out an application to completing station work as a certified on-air DJ.

WSIA's entry exam is also created and administered by the Personnel Department. Ivany is responsible for scheduling all station-related events, including staff meetings, and is also in charge of disciplinary procedures for both FCC and station infractions. It requires constant communication with all staff members, including the directors of every other department.

His favorite part of being Personnel Director is making connections with new members and helping them develop into successful DJs.

"I enjoy that members look up to me when they need assistance and I can be there to help them succeed," he says.

Ivany was appointed Personnel Coordinator soon after joining the station. The

of commitment and quickly agreed to vote him in as Coordinator until he had enough seniority to become a Director.

"During my first week of being a member I stayed late on a Friday afternoon to clean the entirety of WSIA," recalls Ivany. "The place was spotless! Then I began running and scheduling meetings and workshops. It was as if I blinked, and suddenly the full staff of WSIA had decided to vote me in as Personnel Director.'

According to Ivany, WSIA is an excellent place to learn new skills that are not only enjoyable, but are useful and transferrable for a variety of careers. It is also a place to call home.

"Here at WSIA, we have so many opportunities for learning new skills and leadership opportunities that fit beautifully into any resume you need. You also have the opportunity to join our perfectly insane

WSIA currently has about 30 members. Despite its growing size, says Ivany, you'd be surprised at how close-knit they

Ivany runs his own on-air show on Wednesdays from 6-8pm and Saturdays from 12-3pm. He plays a variety of genres in the station's alternative format including metal, rock, punk, and pop.

"If you're bored and studying on a Wednesday night or just waking up and preparing for your Saturday night partying, I highly suggest you tune into 88.9 FM or WSIA.fm online and jam out to my orga-

PROFESSORS

The Pages on the Screen

An Interview with Dr. Jeffrey Couchman

BY: SIDNEY MANSUETO

Dr. Jeffrey Couchman is a screenwriting professor at the College of Staten Island. A member of the CSI community since 2012, his focus on screenwriting extended his career from screenwriter to educator.

Couchman earned a bachelor's degree in film production from Southern Illinois University, and then a master's in English from CUNY Hunter College. Later on, he carned his PhD in English from the CUNY Graduate Center in New York.

I sat down with Couchman recently to interview him, where I asked some of the most intriguing and fascinating questions about the screenwriting industry and his life as a creator.

Couchman first discovered his interest in screenwriting by reading a lot when he was younger.

"I devoured books as a kid," he says. He also watched tons of movies and television, and he would even act out scenes from them.

"Watching, of course, lead to creating. When I was in 5th grade, I knew I wanted to work in film. I didn't know what I wanted to do in film exactly, because at the time my focus was short stories and novels. When I got to college was when I realized I wanted to work in the writing part of the

Couchman always had a passion for film and books. "I would spend my summers watching a lot of television, which was where most ideas came from. I started writing stories and novels in the 5th grade, and screenwriting in high school.'

"It wasn't until college," he says, "when I wrote my first full screenplay of

Professor Peck was fascinated by "how

New York Theater, and the Hartt School in

He also wrote the play "Three Wise Guys," which was an off-Broadway production that ran at the Beckett Theatre in New York.

The hardest project he wrote was a novel about his sister who attempted suicide. The deep, dark and personal subject matter made it difficult for him to write it.

The easiest project he wrote was "Three Wise Guys" since it "...was based on two short stories by Damon Runyon. Scott Evans worked as a collaborator with

Couchman wrote his first screenplay right when he got out of college. He had just gotten married and had some friends in his apartment and they were constantly

The project soon became 170 pages, but was too long for a screenplay.

He finds most of his inspiration for his projects by observing people. "I think looking at what they are doing at a specific moment makes me think. It makes me

When Couchman hits a "dead end" when writing, he likes to take naps or walk. "It's good to remove yourself from the space of the paper for a while."

He is influenced by the works of Billy Wilder and Robert Towne. Wilder's "... films have everything you need to know about structure. There is also snappy dialogue." Towne's film "Chinatown" "...is so organic and pieced together beautifully."

Couchman's advice for someone who wants to pursue screenwriting is to read a lot and see a lot of movies. He also recommends going back to the classics, and PROFESSORS

An Inside Look at One of CSI's Geology Professors

Dr. Jane Alexander Discusses her Passion for Geology and her Career

BY: BROOKE PRICE

Dr. Jane Alexander, a geologist, a geology professor, and chairperson of the Earth and Environmental Science Department, provided me with some insight about her early life and her current research projects during a recent interview.

Alexander's passion for geology was fueled by her interest in rocks as a kid. Her mother, who was a chemist, further expanded Alexander's knowledge of this topic by answering any questions that she might have had.

She later decided to pursue a degree in geology. Alexander got her bachelor's degree in geology at the University of Edinburgh in Scotland. She then got her PhD in geology at University College London.

After she got her bachelor's degree, Alexander worked for two years at an environmental consultancy company just outside of London. She worked on projects related to nuclear waste disposal and modeled what happens to the waste after it's been buried.

Alexander decided to become a professor in addition to being a geologist because she enjoys research. Since she had experience in working in the industry and she went back to school to do her PhD, she realized that she liked the research environment better than the industry environment; "you are able to choose your direction a lot more than just being given assignments...

a lot of freedom."

The most memorable experience she had as a geologist was finding something surprising and trying to figure out why it happened. When she first taught sedimentology, she found an outcrop in the back of the parking lot and she noticed that the rocks in the outcrop weren't what they were manned out as.

This was because the exposure had recently been blasted out to make room for

Over the years, Alexander was able to travel around the world conducting field work. Her favorite place she did field work in was in the south of France where she did undergraduate mapping; "it was a beautiful area, the weather was gorgeous, we stayed in a really nice campsite, everyone was

The most interesting place she visited for work was Japan, where she did field work for her PhD. In Japan, she collected samples of sedimentary rock to analyze for major elements and rare earth elements.

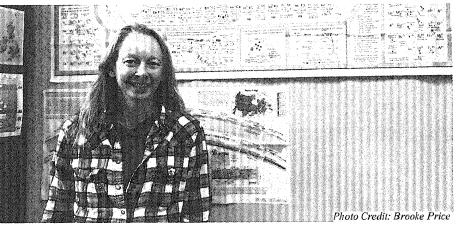

Alexander is currently doing a survey of the Staten Island shoreline to see how much microplastic contamination there is. "There's no other area in New York City where people have analyzed the sediments [on the shoreline for microplastics]... some people have analyzed the seawater and the Hudson Estuary, but not the actual sediments on the shoreline and it's a breaking field, so we're at the moment, still de-

veloping a methodology that's reliable to gram and figure out what direction to take actually find the microplastics and separate it in. It took about 5 years of writing and to be doing basically a spatial analysis."

For her project, she collected sedi-

them out from the sediment and then, when going through committees to get to the we're happy with the method, we're going point where they actually launched the Alexander expressed that a lot of re-

ments from the east coast every 200 meters search and writing goes into coming up and then she would have to go around the with the proposal in the first place to see rest of the shoreline and collect samples what other colleges are doing as well as

There are about 50 students currently enrolled in the program. The program started out small, but it is growing as more students show an interest in the earth and environmental science field.

Alyson Bardsley: A High Impact Professor A Professor's Passion Drives Success in the Bertha Harris Women's Center

BY: NATALIA SANDOR

Alyson Bardsley is a mentor, an academic, and a challenger of conventional thought. She also is a very knowledgeable and enthusiastic tenured professor who has been teaching at CSI since 1997.

Bardsley teaches a variety of courses at the college but is well known for teaching English and Literature classes. Recently, she has become a women's gender and sexuality studies professor at the college after discovering her "interest in feminism and how it asks unasked questions."

She is curious and always searches to better understand the people as well as the world around her. It is her drive to connect and to listen that makes her humility and empathy shine. These qualities make her the perfect leader and director of the Bertha Harris Women's Center.

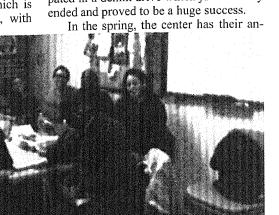

Bardsley currently co-directs the Bertha Harris Women's Center, which is located in building 2N room 106, with

Catherine Lavender. The center is staffed by interns and has a very dedicated college assistant named Lori Uccio.

The interns at the center are responsible for organizing campus events and for researching various topics in relation to gender studies as well as the center's mission. This mission is described by Bardsley is to "support women students and their

The Women's Center is making waves at the college in the areas of inclusion, equality, sustainability, respecting diversity, empathetic thinking, and so much more. This can be seen by the variety and expansive nature of their events.

The center has supported a range of events including stress workshops with focuses on self-care, events that speak about menstrual stigma and information sessions regarding STIs. The center even participated in a denim drive which just recently

Students and interns inside the Bertha Harris Women's Center.

nual community reading of the "Vagina Monologues" which happens sometime around Valentine's Day. The center even holds a fundraiser in order to give a scholarship to any single moms who are also working to get a higher education here at

Every fall, the center hosts the "Take Back the Night" event which raises awareness about things like domestic violence and abuse. This year, around 120 people

The center also ran a domestic violence showcase in 1P during the month of October where they display different quotes to highlight the severity of the issue and trauma that can be caused in these people who benefit from their efforts. sorts of situations.

Bardsley are making big changes at the sive and empathetic place to be. Bardsley college and providing female, transgender and non-conforming students with ample amounts of opportunity to find support on their sometimes really different journeys.

"She is passionate about what she believes and thinks about things that others would not think about on their own," says Uccio. For anyone who knows Bardsley knows that this is most definitely true.

Bardsley is passionate beyond belief about things like the impact we have on the environment and about social equality.

But the biggest thing about Bardsley is that she cares. "She cares so much about the student. She will do whatever it takes to get things done and that is why I love

She continues, "she knows what she has to get done so she cares about the work. But she cares about the person doing the work too." This is hard to come by and the college is so lucky to have someone like Bardsley who places emphasis on both.

On December 10th they will host a wrapping party for the gift drive they host for Gift Horizon. Bardsley explains how if it wasn't for the Women's Center, Christmas would not happen for a lot of different

In the fall of 2020, Bardsley will be On October 9th the center co-hosted a stepping down as co-director. "This will be her efforts and for her passion as she enters

The Women's Center is disrupting the status quo and implementing initiatives It is easy to see how the efforts of that will help make CSI a more incluleaves with a legacy that has impacted so many lives.

Hopefully the center will continue to move in the direction she has pushed it in.

Bardsley has so much kindness and puts so much heart into the things that she does as well as the things she says. It is this mindful way that she conducts herself that makes her a person of great impact and of

CSI is grateful for this tremendous "Human of CSI."

Behind the Scenes with Mitchell Lovell

A Driving Force in CSI's Media Culture Department

BY: CARLOS GLICK

Mitchell Lovell is part of the Media Department at the College of Staten Island. Mitchell graduated CSI in 2014 from the Macaulay Honors Program. He majored well. in Cinema Studies and minored in Mathematics.

Mitchell chose something that he knew he was going to enjoy studying. Lovell says, "Part of me thought I only had so many years to be on Earth, so I wantsomething that I enjoy doing."

Lovell goes on by saying, "I wanted to be. study movies because I loved movies." He knew he had always wanted to become an author because he liked storytelling.

However, he didn't like to read, which was a big deal. "You can't become a writer if you don't like to read."

At some point while Lovell was in high school, he wanted to pursue video and/or filmmaking. When Lovell was applying to college, he made sure he was applying to places that had such programs.

Part of Lovell's role here at CSI is that he is a College Lab Technician (CLT). So, er that works and that there is a camera inhe does a lot of CLT's on campus.

What a CLT does is that they make sure that students have access to the tech-

nology that they need in order to study and research. One thing Mitchell does is facilitate the labs and make sure that equipment is circulating so students have access to it, and are prepared to use the equipment as

It means making sure that things are working, things are fixed that need to be fixed, everything is ready, present, and set up when they need to be set up safely.

In certain classroom settings, he will set up different camera rigs and tutor some ed to spend my last years on Earth doing students in how to edit software. Sometimes, he will even install software as need

> He says, "some of it is fun and some of it is computer work. Purchasing things is a big part of it because they need to make sure that the college is up to date on all the equipment that students can use."

> Due to his CLT position, he responds to a Senior CLT. He answers to a chairperson and he also has to meet the requests of our production and design faculty, which includes the Cinema and Design & Digital

He has to make sure they have a printsure those things are in place at all times.
