character and ability to be adapted for classroom space and other academic purposes.

The plan calls for five design packages including a theater and auditorium, two brick academic quadrangles, a student center and library, a gymnasium and power plant.

The library will be situated in one academic quadrangle, while the student center will be located in another. In between the two quadrangles will be the theater, the visitor's center, administration building and gymnasium. The quadrangles will be surrounded by perimeter parking, access roads, paths and woods to give the campus a "traditional feeling."

Ms. Seder said.

Winstanley said the campus will receive a total of 520,000 square feet of new space and 465,000 square feet of renovated construction.

CSI plans to leave St. George in 1991 and Sunnyside in 1992. That schedule reflects a delay of a year; in 1985, the state discovered it could not sell bonds to finance

the construction and the Assembly and Senate could not agree on legislation to create a new bonding mechanism.

More than a year later, that problem was resolved when a bill was passed last summer, allowing the Dormitory Authority to sell \$1.3 billion in bonds, a portion of which will be used for the CSI project.
